

## CANCER DATA REGISTRY OF IDAHO

Year Funded	Type of Program	Affiliation	Compliance with Public Law 102-515: Legislation and Regulations*	
			Authorizing legislation for a statewide registry: Yes	Regulations in place for data reporting, confidentiality, and use: All
1994	Enhancement	Idaho Hospital Association		

\*Source: NPCR Legislative Database, January 2001.

### Cancer Burden

Cancer is a devastating disease. According to the American Cancer Society, in 2001 an estimated 553,400 Americans will die of cancer, and approximately 1.3 million new cancer cases will be diagnosed. These estimates do not include in situ (preinvasive) cancer of any site except urinary bladder or approximately 1 million cases of nonmelanoma skin cancer to be diagnosed this year. In Idaho, an estimated 5,000 new cancer cases will be diagnosed, and approximately 2,200 will die of this disease in 2001. Idaho ranks 47th highest overall in cancer mortality rates among the 50 states and Washington, D.C.\*

### The NPCR

Cancer surveillance involves the systematic collection, analysis, and use of cancer data. Information derived through surveillance is critical for directing effective cancer prevention and control programs. The Centers for Disease Control and Prevention's **National Program of Cancer Registries (NPCR)**, authorized by Congress in 1992 through the Cancer Registries Amendment Act (Public Law 102-515), serves as the foundation of a national, comprehensive cancer control strategy. Statewide cancer registries provide critical data to help identify and monitor trends in cancer incidence and mortality over time; guide cancer control planning and evaluation; help

allocate health resources; and advance clinical, epidemiologic, and health services research.

Through the NPCR, CDC supports registries in 45 states, the District of Columbia, and three territories, representing 96% of the U.S. population.<sup>†</sup> Forty-five programs receive support to enhance existing registries; these have on-going cancer data-collection activities, policies and procedures for central registry operations in place, and core staff employed. Four programs receive support to plan and develop new registries; they are typically involved in laying the necessary groundwork for establishing a central, population-based registry.

With fiscal year 2001 appropriations of approximately \$36 million, CDC continues to support and enhance state cancer registries, and promotes appropriate uses of data. The CDC will also develop special research projects, such as studies of patterns of cancer care in specific populations and assessments of data for integration with geographic information systems.

### State Highlights

- The Cancer Data Registry of Idaho (CDRI) was certified by the North American Association of Central Cancer Registries for completeness, timeliness, and quality of its 1997 data.
- The CDRI, through a contractor, has geocoded all cases of cancer

reported among Idaho residents diagnosed since 1990. Geocoded data have been used in conjunction with geographic information systems (GIS) coverages of road networks and health care delivery systems to measure distances from residences to cancer treatment facilities. Travel distance data have been used in statistical models to help explain differences in cancer treatment and outcomes.

- The CDRI collaborated with Idaho Women's Health Check and the Idaho Breast and Cervical Cancer Alliance to produce a pamphlet, *Breast Cancer in Idaho, 1993-1997*. This pamphlet highlighted CDRI data on female breast cancer incidence, screening, staging, treatment, survival, and mortality, with comparisons to SEER data and Healthy People 2000 objectives. Results identified geographic differences in breast cancer screening and treatment practices. Pamphlets were disseminated to hospital administrators, medical staff, and public health district offices in Idaho.
